

Homework

1. Write a simple calculator program in Javascript to perform addition, subtraction, multiple and division operation using:
 - a. if .. else if .. else
 - b. switch .. case and

Write functions as shown in the lecture notes for addition, subtraction, multiplication and division operations and call these functions inside if .. else if .. else and switch .. case conditions
2. In the form that was created yesterday, add the following events:
 - a. When the button is clicked, check if value is present in Full Name using if and alert the value. If the value is not present then alert "Full Name is missing"
You need to give an id to the full name and write a onClick event for the button "Submit Form". In that event get the value provided for "Full Name" using document.getElementById and value.
 - b. When the gender is selected alert the selected gender.
Use the onClick event of the radio button and alert the value of the clicked radio option.
3. [Optional - Not needed for certificate] Create your profile on EnGrip and share your public profile URL with us
