

Home work

- Create the HTML page as per the image shown below
- Use the same file that you created yesterday
- Add new CSS file (style.css) and link it to the HTML (external CSS)
- Upload the new file(style.css) and changed file (index.html) to GitHub using add, commit and push commands
- Make sure your changes are reflected in the GitHub page that you created yesterday.

Note: You need to do some research on web for input elements of type text, password, radio, checkbox, select and text area.

Welcome to 10000 Coders Programming Challenge

Hello guys,

Welcome to the HTML/CSS programming exercise by 1000 Coders. This will test your basics in HTML and CSS. You need to recreate the document you are reading now using HTML/CSS. Make sure that the page looks exactly like this document.

General Instructions

1. There will be a 15px margin between all elements in the form shown below
2. Use external CSS for styling
3. This exercise will cover the following constructs of HTML
 - HTML Form
 - Text inputs with placeholders
 - Text area
 - Password input
 - Select drop-down box
 - Radio buttons
 - Checkboxes and
 - Buttons

So, let's get started. All the best !
